Golden, CO 80402-0464

Dear Ms. Murdoch:

Enclosed is the Colorado Bird Observatory's report on the Standley Lake Bald Eagles. Although we wish we had more information, we believe our results depict home range size and important features within the home range that were regularly used by the Standley Lake eagles from March 10 through March 22, 1993. Extrapolating to other months of the year is probably not appropriate. However, in the absence of additional information the enclosed report should help in planning construction activities for this coming summer.

A report dated April 8, 1993 from the USFWS stated that there have been recent sightings of bald eagles in the Standley Lake area. We had personnel observing at Standley Lake for six hours on April the 9th, four hours on the 10th, and one hour on the 11th. There were sightings of an osprey and golden eagles, but no sightings of any bald eagles.

Sincerely,

Michael Carter  
Executive Director
